```objc
- (BOOL) login:(NSString *) email password: (NSString*) password

    Firebase *ref = [[Firebase alloc] initWithUrl:@"database.url"];

    [ref authUser:email password:password withCompletionBlock:^(NSError *error, FAuthData
*authData) {
        if (error) {
            // an error occurred while attempting login
            return false;
        } else {
            // user is logged in, check authData for data
            return true;
        }
    }];
}
```
